

Help!!!!

Your friend Max has been bitten by a snake, he is conscious. Do you know what to do? Can you save his life?

1. Write a series of questions about the symptoms and signs that Max might have. E.g. Is he vomiting?
2. Describe how you will manage the treatment of the snakebite.
3. Make a list of things to remember when treating this injury.
4. Prepare a demonstration of the treatment of snakebite for the class. Yes you can include a role-play of the actual injury.

Procedure

You will need to work in groups of 3

One person will be Max the snake bite victim.

Two people will administer first aid. One person will need to read out the questions about the signs and symptoms of snake bite, the other will need to answer these questions.

Bandages are available in the First Aid Kit.

Remember

Use a dictionary if there are words you do not understand.

Be as accurate as you can.

Ask me if you have any problems.
